THINKING ABOUT | ARTIFICIAL LAWN

Our Australian climate has plenty of advantages over many other places in the world, one of them being the benefit of enjoying an outdoor lifestyle.

The flip side to our love for the outdoors is that water is a valuable commodity and this is something that more and more homeowners are taking into account when they plan the design of the outdoor spaces of their property.

It isn't just the quarterly bills that can worry people. As everyone knows, water is essential to life and that we should all do whatever we can to make sure we use it thoughtfully.

This is one of the reasons why having an artificial lawn has become so popular. Keeping grass in good condition can be time consuming as it needs so much continuous maintenance.

Of course a lawn also soaks up a great deal of water, which can lead to extra expense as well as wastage. Thinking about having artificial lawn is something more people than ever are doing, but the Australian climate reputedly has the harshest UV levels in the world, so some synthetic grass is just not cut out for the job.

At Australian Outdoor Living we set new standards of excellence and innovation in outdoor living solutions and that is why we are the market leader in instant artificial grass, as well as in many other areas.

WHAT TO LOOK FOR | ARTIFICIAL LAWN

Artificial Lawn is becoming an increasingly popular alternative to natural grass. Having come a long way since its green-carpet-like appearance, these days it's hard to tell the difference! For exceptionally realistic looking lawn, you do not need to look any further than Australian Outdoor Living's premium range of durable Artificial Lawns.

Australian Outdoor Living's range of impressively realistic Artificial Lawn, mimics nature with brown curly thatching and with 3 pile heights, you can be sure to find a lawn suitable for your yard.

As with all our products our qualified and friendly consultants will provide you with complete instructions and training on how to maintain your lawn with our post/pre-installation care guide.

Unique Thatching

Our artificial lawn is designed with a unique thatching fibre tufted into the base and our installation procedures mean that it replicates the springy and supportive characteristics of real natural grass.

UV Resistant & Fade Protection

UV is the single greatest threat to Artificial Lawn. If yours is not properly protected, you risk the bristles disintegrating, the lawn changing colour or fading over time. It's for this reason that your Artificial Lawn must stand the test of time.

Pet & Allergy Friendly

Artificial grass is a great solution for allergy sufferers and our whole range is 100% lead free and suitable for pets too. Of course having an artificial lawn means no mowing, no watering, no pesticides, no fertilising and a perfect lawn all the year round.

INSTALLATION | ARTIFICIAL LAWN

When you buy artificial lawn from Australian Outdoor Living we look after every aspect for you, from the initial free, no obligation quote and measuring service right up to installation by our professional teams. Our installation process is as follows:

PREPARATION

The lawn area is first dug out to approximately 50mm - 100mm (dependent on soil and lawn type) in preparation for special base material. In order to maintain your guarantee and maximise the life expectancy of your lawn, we recommend one of our professional installers to lay and complete your project.

However you can save substantial money by carrying out some of the basic preparation and digging work yourself and our design consultant will give you all the information you need to come to the best decision for you.

LEVELLING

The area is then completely levelled in preparation for base materials which are then spread across entire area, screeded and dampened in preparation for compacting.

COMPACTING & LAYING LAWN

Compacting ensures foundation integrity and only then can the new turf be rolled out across the entire area. Each sheet is strategically positioned to minimise join points and trimmed to size. Each join is then reinforced with a unique rubber strap to ensure no movement. We also pin the lawn if necessary.

DEFIBRILLATION

Australian Outdoor Living has developed a unique machine defibrillation process to ensure the lawn pile is raised and consistent throughout the entire area and this is a critical part of the process to make your lawn look perfectly manicured.

FINISHING TOUCHES

After fine sand is spread evenly across the entire lawn, brushed by hand to ensure an even lay and defibrillated again by machine to finish, our professional installers provide a final once over inspection.

The end result is nothing but a perfectly manicured lawn left behind.
